Spring Evening Meeting

# Neonatal Diseases in Lambs

After birth, the majority of lamb losses occur within the neonatal period. There are many management and husbandry factors, diseases and disease syndromes that contribute to this picture and improvements can be made on many farms leading to improved welfare and profitability. Joe will look at causes of lamb losses, prevention, treatment and control using peer reviewed evidence coupled with a pragmatic and practical approach.

## Wednesday 28th March

Glenavon House Hotel, Cookstown

with **Joe Angell**  
BVSc MSc PhD MRCVS

Joe graduated from the University of Liverpool in 2008 before entering mixed practice in north Wales. Whilst in practice he carried out research into drunken lamb syndrome and after 3 years he returned to Liverpool to do a PhD in the epidemiology of contagious ovine digital dermatitis (CODD) whilst concurrently doing an MSc in Epidemiology at the London School of Hygiene and Tropical Medicine and continuing to locum in practice. After completing his PhD and MSc in 2015 he spent a further period in full time academia at Liverpool before returning to practice. He now carries out day to day clinical duties, holds an Honorary Fellowship at the University of Liverpool, continues to carry out research on a variety of themes as well as some consultancy.
